Manual for Date Search Feature

Description:

The Date Search feature will allow users to search for specific tasks on a specific date or within a range of dates.

Instructions to Use:

1. **Navigating to Date Search Page**

   - When the user is on the home page there will be a green button beside the "Search on Tag" button that says "Search by Date".

   - When the user clicks this button they will be redirected to a page where they will be prompted to enter in dates.

2. **Using the Date Search Page**

   - There will be two date fields, one that is just called date and the other that is called end date.

     - The user is only required to use the first one because they will always need to enter one date but will not always need to enter an end date if they are not searching in a range.

   - If the user only uses the first date field and does not fill out the end date then they will be searching for one date.

     - If the user chooses to search within a range they will need to fill out both fields to fill in the range.

   - Once the user has entered in their date(s) they will need to hit the green + button to search.

3. **Viewing the Results**

- Once the viewer completes the search they will be navigated to a page that looks similar to the home page but will only show the tasks that matched the date(s) they searched for.

- To remove the search they will need to hit the "Remove Search" button which will bring them back to the home page.
